

Green PC World Private Limited

Final Uniform Framework on Extended Producer Responsibility (June 2020)

POLICY OVERVIEW

At **Green PC World Private Limited**, transparency and accountability in electronics lifecycle management dictate our core operations. This document outlines our structural alignment with the **Final Uniform Framework on Extended Producer Responsibility (EPR) released in June 2020**. This framework establishes a centralized, digital-first approach to holding producers, refurbishers, and importers accountable for the end-of-life management of their products.

Core Principles of the Uniform Framework

The 2020 EPR Framework standardized the compliance mechanism across the nation, shifting from a fragmented state-level approach to a unified national model.

1. Centralized Digital Portal

The framework mandates the use of a centralized online portal managed by the Central Pollution Control Board (CPCB) for registration, filing of returns, and tracking of EPR targets. Green PC World Private Limited utilizes this system to ensure real-time compliance and transparent reporting of all refurbished and recycled units.

2. Specific EPR Targets

Producers and refurbishers are subject to strictly calculated collection and recycling targets based on their historical sales or generation data. We rigorously monitor our distribution metrics to ensure our collection mechanisms meet or exceed these mandated quotas.

3. Trading of EPR Certificates

A landmark feature of the uniform framework is the introduction of tradable EPR certificates. If an entity exceeds its recycling target, it can generate surplus certificates to be traded with other entities falling short of their obligations. This incentivizes over-compliance and robust recycling infrastructure.

Operational Integration at Green PC World

To successfully navigate and comply with the Uniform EPR Framework, we have integrated the following strategies into our business model:

- **Lifecycle Tracking:** Every laptop refurbished and sold by Green PC World is logged in our centralized database to accurately forecast future end-of-life return rates.
- **Producer Responsibility Organizations (PROs):** Where applicable, we collaborate with registered PROs to enhance our collection networks, ensuring e-waste from remote locations is efficiently channelled back to our certified recycling partners.
- **Third-Party Audits:** To maintain absolute integrity in our EPR reporting, we conduct regular third-party environmental audits verifying our collection volumes and recycling methodologies.

Commitment to Circular Economy

Beyond mere compliance, the EPR framework aligns perfectly with our foundational goal: extending the life of computing devices through high-quality refurbishing and ensuring zero-landfill disposal when the devices finally reach the end of their utility.
